A statistic (singular) or sample statistic is a single measure of some attribute of a sample (e.g. its arithmetic mean value). It is calculated by applying a function (statistical algorithm) to the values of the items of the sample, which are known together as a set of data.. More formally, statistical theory defines a statistic as a function of a sample where the function itself is ...

Statistic - Wikipedia

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

1. Introduction. Occupational accidents are responsible for many fatal and nonfatal injuries in the United States. The Bureau of Labor Statistics reports that about 3 million nonfatal workplace injuries and illnesses occurred in 2012 (Bureau of Labor Statistics, 2011), while fatal injuries in the same period were reported to have a rate of 3.2 cases out of every 100,000 full-time workers ...
